

To promote the construction of pumped storage power stations, it is of great significance for the construction and optimization of modern power systems. 2. Development trends of pumped storage energy in China To effectively support the construction and development of pumped storage power stations, China has issued a series of supporting policies.

The thermal management technology of energy storage power stations can ensure that batteries operate within the optimal temperature range, extend battery life while preventing thermal spread, and guarantee the safe, efficient, and long-life operation of the energy storage system.

The relevant situation is of great significance for promoting the construction of pumped storage power stations and for the construction and optimization of modern power systems. 1. Introduction Pumped storage power station is a kind of hydropower station with energy storage function.

During the "Twelfth Five-Year Plan" and "Thirteenth Five-Year Plan" periods, to adapt to the rapid development of new energy and UHV power grids, pumped storage power stations such as Fengning in Hebei Province and Jixi in Anhui Province ushered in a new peak.

In recent years, safety issues such as thermal runaway of lithium batteries, fires, and explosions in energy storage power stations have occurred frequently, posing a huge threat to life and property and sounding the alarm for the sustainable development of the energy storage industry.
